SMARTPHONE ENERGY FOOTPRINT SINCE 2007

To approximate total manufacturing electricity demand associated with the production of smartphones, data in this chart drawn was from reported product level data from Apple's iPhones (iPhone 3g - iPhone 5s)¹⁰, with maximum memory configuration for 2007-2013, and lifecycle analysis estimates using a Sony Z5 for 2014-2016. Co₂e data as converted to kwh by applying standard global carbon intensity for electricity generation of 528gCo₂e/kwh.

960 grid system

CAMPINAS TECH

TALENTS

The screenshot shows the 960.gs website, which is a resource for the 960 Grid System. The page has a dark blue header with navigation links: ADAPT.JS - ADAPTIVE CSS, CUSTOM CSS GENERATOR, and GRID OVERLAY BOOKMARK. Below the header, there are three main sections: Essence, Dimensions, and Purpose. The Essence section explains that the 960 Grid System is an effort to streamline web development workflow by providing commonly used dimensions based on a width of 960 pixels. The Dimensions section states that the 12-column grid is divided into portions that are 60 pixels wide, and the 16-column grid consists of 40 pixel increments. The Purpose section notes that the system is ideally suited for rapid prototyping but would work equally well when integrated into a production environment. Below these sections, there are two more sections: More Columns and Source Order. The More Columns section mentions an alternative version for a 24-column grid. The Source Order section explains how to rearrange elements using push and pull classes. At the bottom, there are two examples of the grid system in use: Sony Music (16 col) and Drupal (12 col). The Sony Music example shows a grid with 16 columns and 20 pixel gutters. The Drupal example shows a grid with 12 columns and 20 pixel gutters.

O site Twitter, desenvolveu uma tecnologia chamada Twitter Blueprint, desenvolvido por Mark Otto e Jacó Thornton como um instrumento para incentivar a consistência através de ferramentas internas. Antes disso, várias bibliotecas foram utilizados para o desenvolvimento de interfaces, gerando inconsistências e um elevado peso de manutenção. De acordo com o desenvolvedor Mark Otto:

"Um grupo super pequeno de desenvolvedores e eu nos reunimos para projetar e construir uma nova ferramenta interna e vi uma oportunidade de fazer algo mais. Através desse processo, nós nos vimos construindo algo muito mais substancial do que outra ferramenta interna. Meses depois, terminamos com uma versão inicial do projeto como forma de documentar e compartilhar padrões comuns de design e ativos dentro da empresa "

WIREFY

Build intuitive, powerful wireframes for smarter web development

Wirefy was created as a tool to help web designers and developers create fast, manageable wireframes. It helps to speed up the journey between sketches and final deliverables. Like the web, it is in constant iteration. This requires a simple workflow and a well-defined collection of atomic elements so that new UIs can be quickly pulled together.

It is our belief that we aren't building pages but rather systems of components. This is why Wirefy has been built to be as flexible and comprehensive as it possible can be. We are giving you the foundation layer to build on. You can style, add or remove components as you see fit.

Our goal is to help you make smarter UX decisions by focusing on the content first rather than the subjective design decisions. With a bit of base knowledge of HTML and CSS, you can start building flexible wireframes without the headache of working through countless calculations.

Creating static wireframes can be great but sometimes clients just don't understand how they function or change based on various devices. Building functional wireframes will help you communicate with clients better and work as a foundation for your fluid designs without losing sight of the importance of the content.

Use Wirefy to build prototypes quickly, then without starting from scratch implement your Wirefy foundation into any additional framework or CMS system for a fully designed deliverable.

Getting started

To get started with Wirefy quickly, you can either clone or download the git repository

IS SKELETON FOR YOU?

You should use Skeleton if you're embarking on a smaller project or just don't feel like you need all the utility of larger frameworks. Skeleton only styles a handful of standard HTML elements and includes a grid, but that's often more than enough to get started. In fact, this site is built on Skeleton and has ~200 lines of custom CSS (half of which is the docking navigation).
